1. The following is an examiner's statement of reasons for allowance:

None of the prior art references, alone or in combination, teaches or fairly suggests the limitation of "wherein said output means selects a display voltage level corresponding to one input display data and **simultaneously generates two different display voltages from the selected display voltage level** so that either one of said two different display voltage can be selected as an output display voltage for each of said output terminals' as recited in original claims 1.

None of the prior art references, alone or in combination, teaches or fairly suggest the limitation of "inverting said selected gray scale voltage level with respect to said inversion reference voltage to generate an inverted selected gray scale display voltage level, the inverted selected gray scale display voltage level being a second display voltage for the output terminal, the second display voltage being different from the first display voltage, **the first display voltage and the second display voltage being available simultaneously**" as recited in original claim 16.

None of the prior art references, alone or in combination, teaches or fairly suggest the limitations of "a generator for **simultaneously generating a plurality of display voltages, said display voltages including a set of positive and negative polarity gray scale voltage corresponding to each of gray scales**" and "wherein selected display voltages which correspond to adjacent two of the output terminals have different polarity from each other" as recited in the newly amended independent claims 17, 21 and 25.
